

Investor-Focused Proposal Questions

Design and User Experience

1. What evidence shows that citizens and municipalities need TrackServ?
2. How will the platform remain accessible to users with limited digital skills or disabilities?
3. What user-testing results support the current citizen and administrator interface designs?
4. How will TrackServ adapt its branding, municipal boundaries, and workflows for other municipalities?

Frontend and Product

5. What makes TrackServ different from existing municipal reporting platforms?
6. How will the citizen portal encourage continued engagement beyond submitting one report?
7. How will the separate citizen and administrator applications be maintained efficiently as the platform grows?
8. What is the roadmap for mobile applications, push notifications, and email status updates?

Database and Technical Architecture

9. Why was Supabase selected instead of the originally proposed Node.js, PHP, and MySQL architecture?
10. Can the shared PostgreSQL backend support multiple municipalities and large volumes of reports?
11. How will investor and municipal data remain secure, especially when using row-level security and role-based access?
12. What is the backup and disaster-recovery strategy if Supabase becomes unavailable?

Testing, QA, and Reliability

13. What are the results of the planned usability testing with 30 community members and 5 NGOs?
14. How will the team test real-time updates, geolocation accuracy, concurrent users, and system performance?
15. What automated testing, load testing, and security testing must be completed before production deployment?
